

President Obama: Stop covering up the science on fracking!

Fracking can't be done safely, it poisons water and people, and it spells disaster for the climate.

On July 27, news broke that your administration covered up a fracking-related water contamination investigation in Dimock, PA after EPA officials reported the water was polluted.

Instruct the US Environmental Protection Agency to reopen its fracking investigation and resume water deliveries in Dimock, PA!

New Yorkers won't allow our neighbors in PA to be poisoned by this toxic industry. All Americans deserve safe drinking water.
